

ENVIRONMENTAL POLICY

WML Consultants shares the desire of the community to develop, use, and dispose of resources in a way that meets the needs of the present without compromising the ability of future generations to meet their own needs.

All WML Consultants activities will be planned and performed in accordance with ISO 14001:2015, so that adverse effects on the environment are either avoided or kept to an acceptable level while meeting all statutory requirements. WML is striving to work with our business partners, clients, subcontractors, and suppliers to find sustainable solutions to projects whilst protecting the world around us.

WML Consultants supports the principles of environmental sustainability and continually endeavours to develop and provide products and services that:

- Have reduced environmental impact.
- Are safe in their intended use.
- Are efficient in consumption of energy and natural resources.
- Can be recycled, reused, or disposed of safely.

Our strategies to implement this policy are to:

- Apply a systematic approach to minimise the environmental consequences of our designs we have control over.
- Control the relevant environmental matters on jobs we have control over.
- Delay or stop any activity we have control over where effective environmental controls are not in place.
- Comply with all applicable laws and regulations, strive towards higher standards, and apply responsible standards where laws and regulations do not exist.
- Promote a positive culture by providing environmental training and awareness programs, encouraging individual involvement with environmental issues.
- Continually reviewing work practices to reduce or eliminate environmental impacts and ensure continuous improvement.

WML ensures the effectiveness of our systems through rigorous application, review, and improvement processes.
